Introduction

- Tuna fishery:
- Ecosystem approach to fisheries (FAO)
- Tuna purse seine fishery (PSF) in the Atlantic and Indian Oceans (62%) (FAO, 2008)
 - European: 70 vessels and 10% global fisheries (Pianet *et al.*, 2011)
 - French & Spanish: 42 vessels followed by IRD, AZTI & IEO since 1980.

- Search of tuna:
 - Fish aggregating devices (FADs)
 - Natural wood log
 - Artificial: bamboo raft, anchored buoy

- Marine macroorganisms
 - Whale sharks (WHS)
 - Marine mammals (MAM)
- Catch of macroorganisms (Hall et al., 2000)

- Restrictions in IO and AO (EU, 2007)

- Objective:
 - Distribution of the frequency of co-occurrence of tuna's PSF with whale sharks and marine mammals in IO and AO.
- Study:
 - The spatial and temporal distribution
 - The impact on the mortality

Materials & Methods

- **Purse seine logbooks [1980-2011, 31 years]**
 - high coverage (almost 100 %)
 - one observation by set or by day
 - declarative data and information only by species groups
- **Purse seine scientific observer program [1995-2011, 16 years]**
 - low coverage (less than 10% of trips)
 - one observation for any change of activity during daytime or by hour
 - independant scientific observers (species identification, size ...)

- **Whale sharks (*Rhincodon typus*, Smith 1828):**
 - Coastal and oceanic tropical waters (Roward & Brooks, 2012)
 - Vulnerable (2000, IUCN)
 - Selection of habitat and migration little known

- **Whale sharks (*Rhincodon typus*, Smith 1828):**
 - Coastal and oceanic tropical waters (Roward & Brooks, 2012)
 - Vulnerable (2000, IUCN)
 - Selection of habitat and migration little known

- **Marine Mammals:**
 - Tropical and temperate waters (Schipper et al., 2008)
 - Various statutes
 - Whale, small toothed whales and big toothed whales

- **Distribution maps & statistical analyses:**

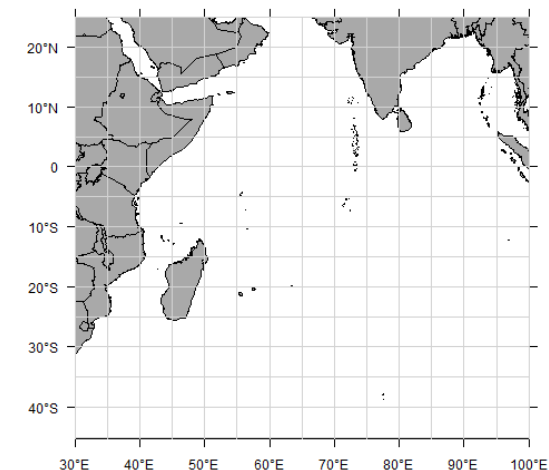

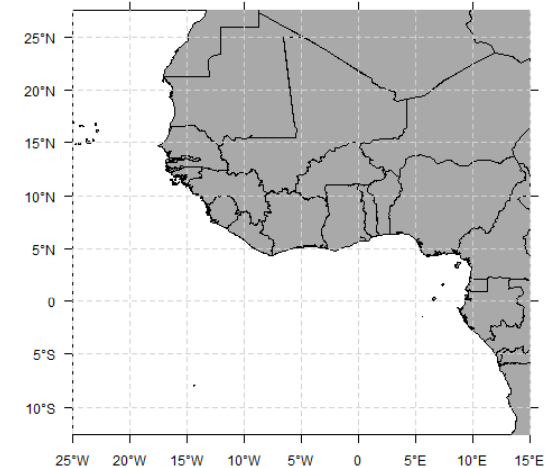

- **SPUE: Sightings Per Unit Effort**
(sightings/activities)

Activities: daily position during fishing activity (set) or travelling

- **Year and season effects**

- AO: trimester
- IO: monsoon and intermonsoon

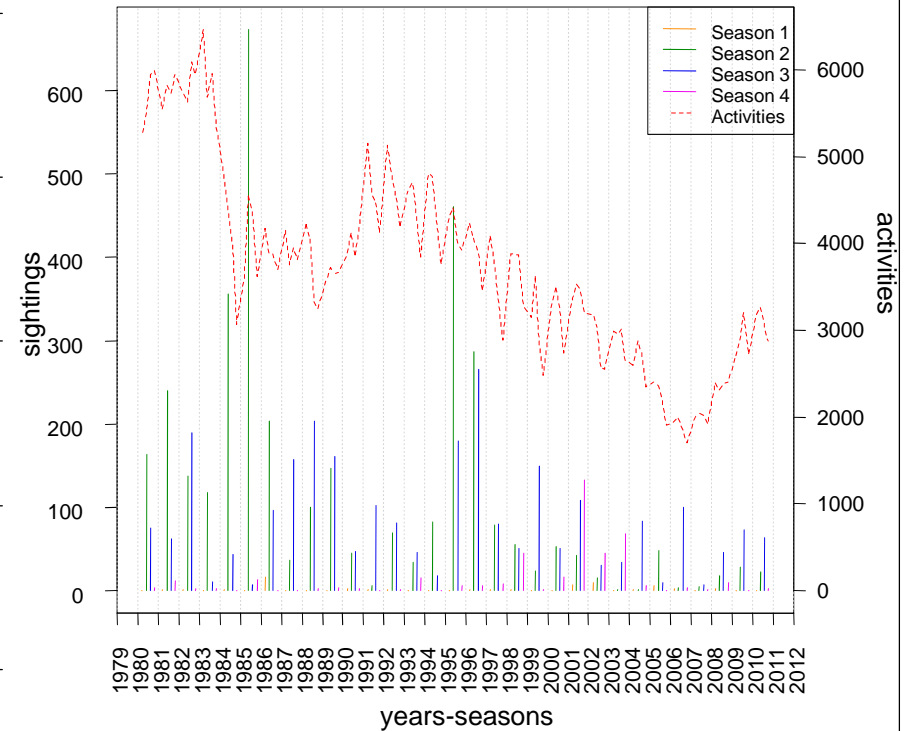

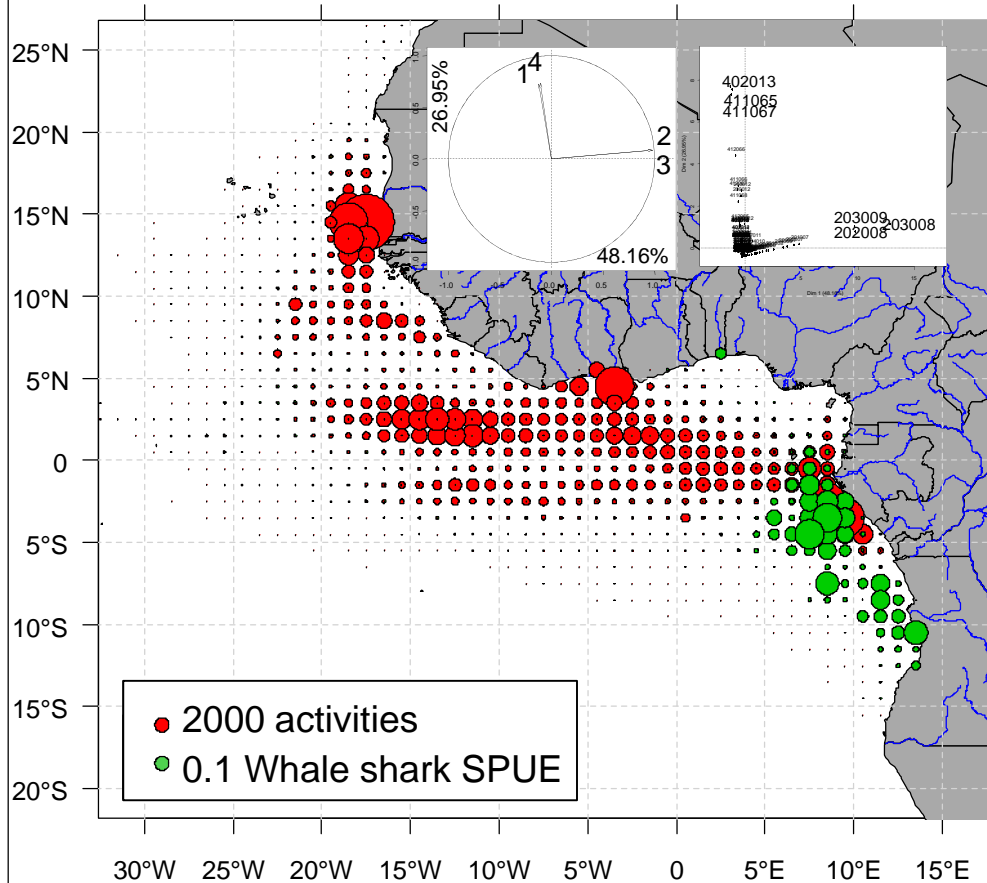

- **Principal Component Analyses to investigate spatio-temporal patterns.**

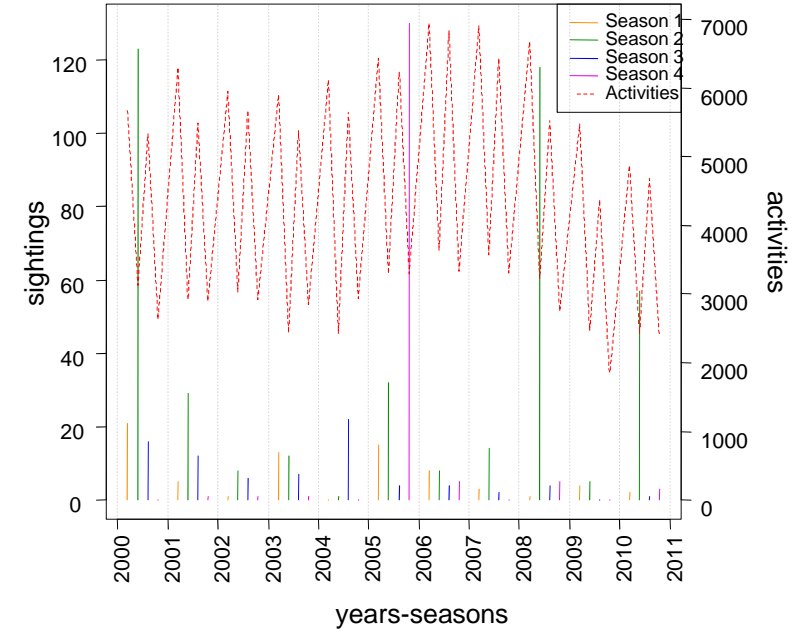

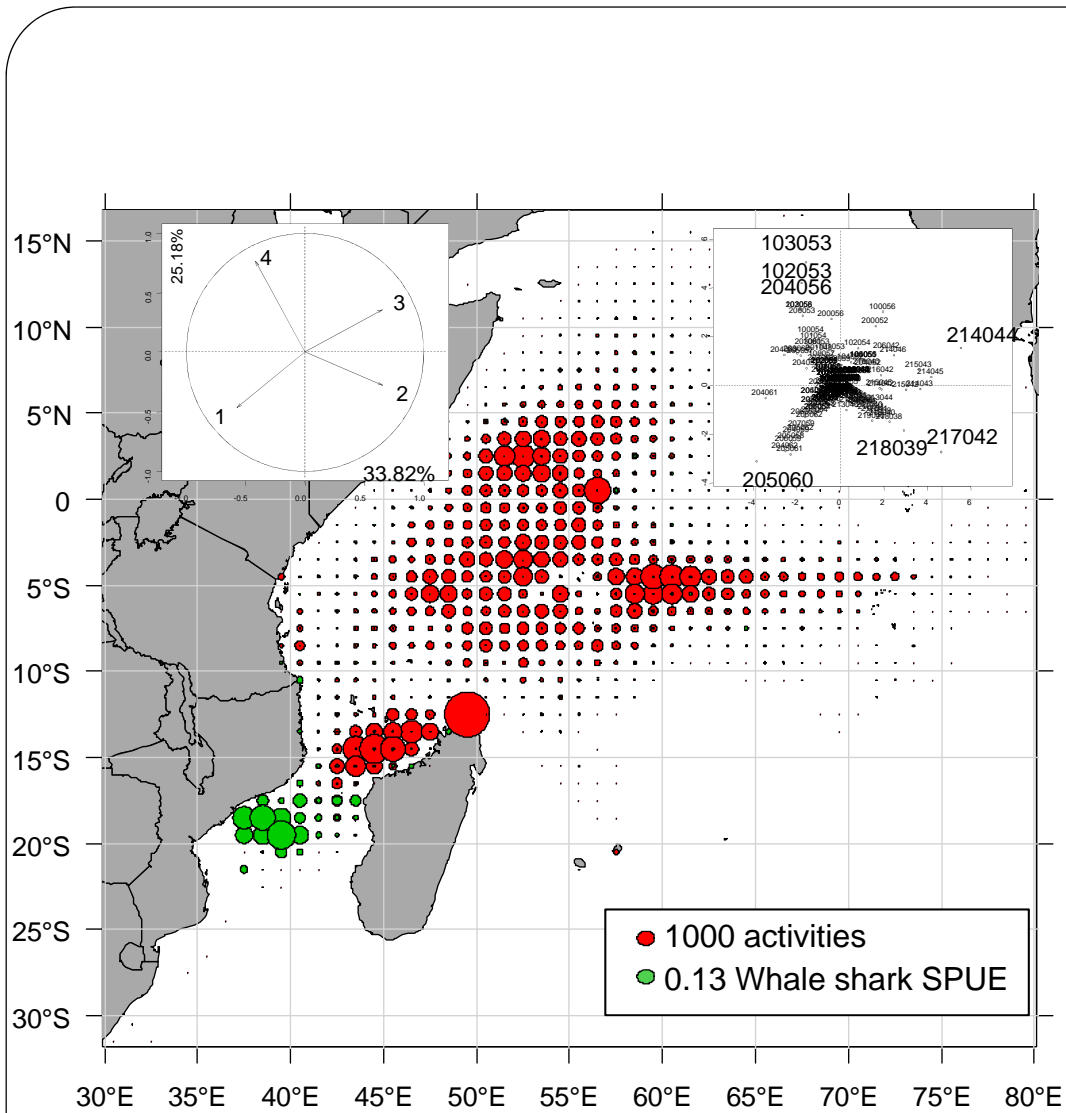

Results

- Logbook data (IO and AO):
 - **775 606 activities** with **1% of WHS** and **2.3% of MAM** sightings.
 - **55%** of set among activities
- Scientific observer data (IO and AO):
 - **284 127 activities** with **0.1% of WHS** and **1.3% of MAM** sightings.
 - **MAM:** **93.3%** of whales (WHA), **0.2%** of big toothed whales (BTW) and **6.5%** of small toothed whales (STW).
 - **6%** of set among activities

Whale shark distribution and annual, seasonal variation of whale shark sightings and activities

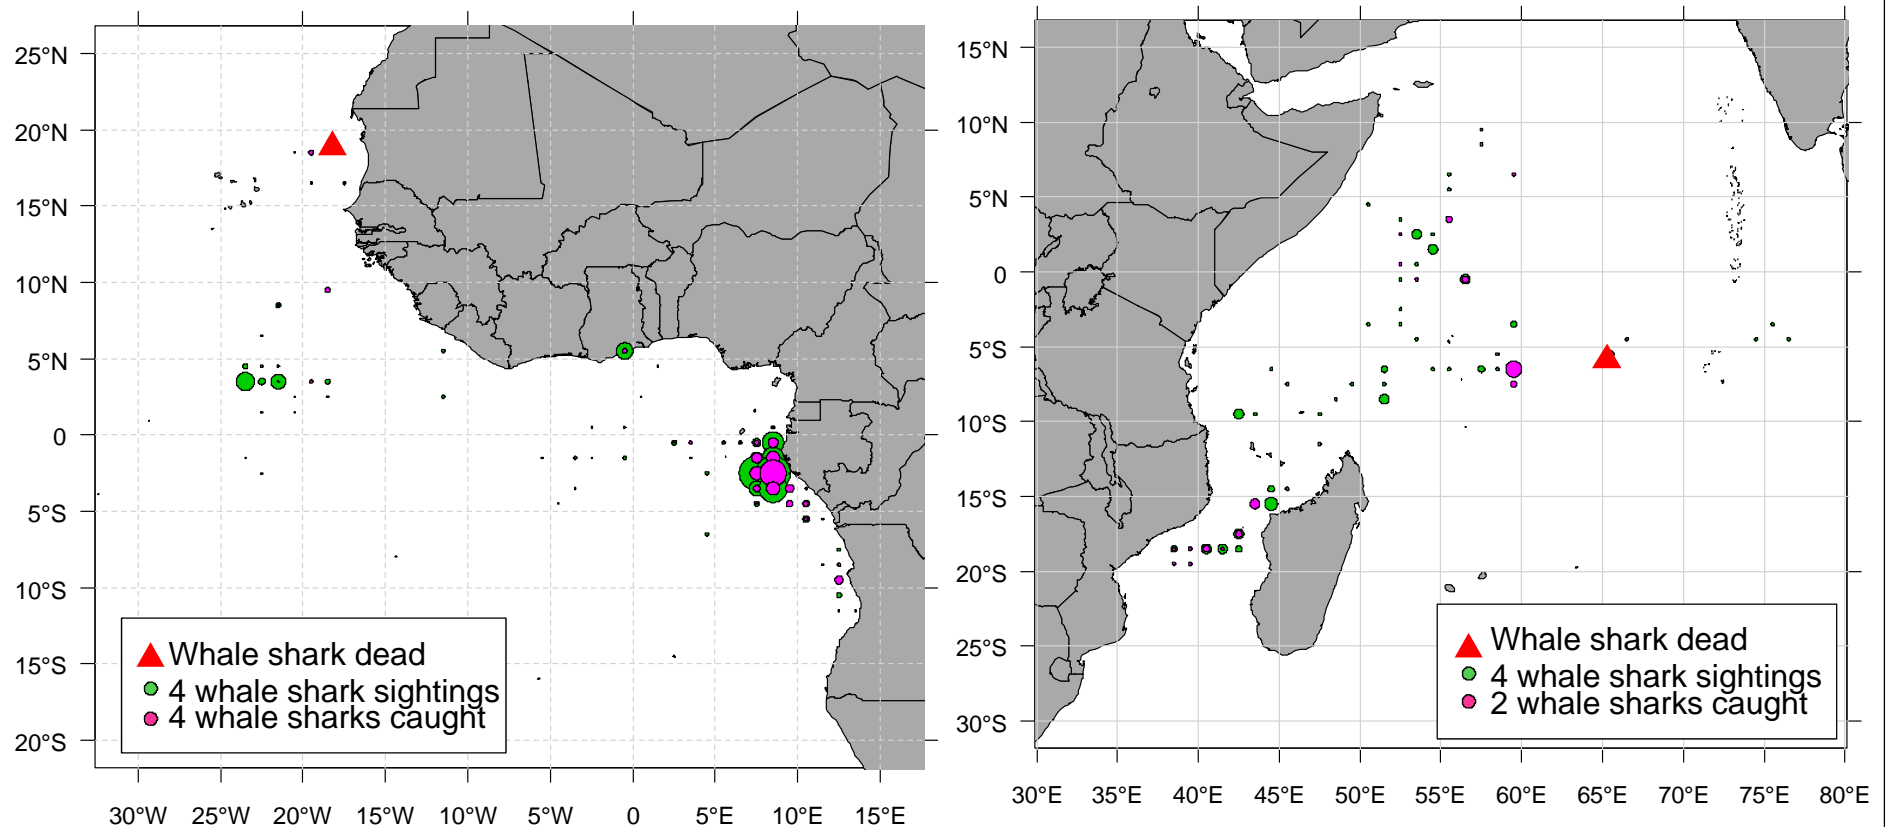

- Coastal zone of Gabon (77%)
- Preponderance of April to September (~6000 sightings)

- Predominance on the Mozambique Channel
- Preponderance of April-May (~ 800 sightings)

Distribution of observations, catches and mortality of whale sharks (Scientific observers data)

AO: Littoral zone of Gabon. 1 mortality case (North) on 110.
 IO: Mozambic Channel and near to the Seychelles.
 1 mortality case (East) on 39.

Indices of interactions between PSF and WHS

Spider graph (logarithmic scale)

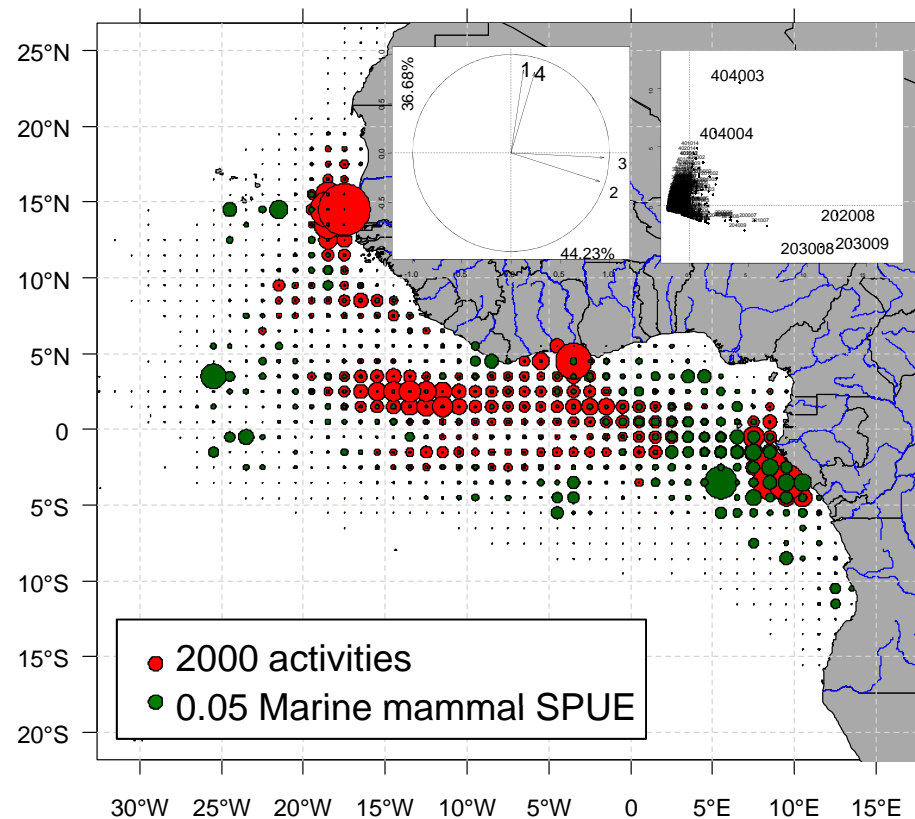

Meeting= 0.11%

Meeting during fishing= 2%

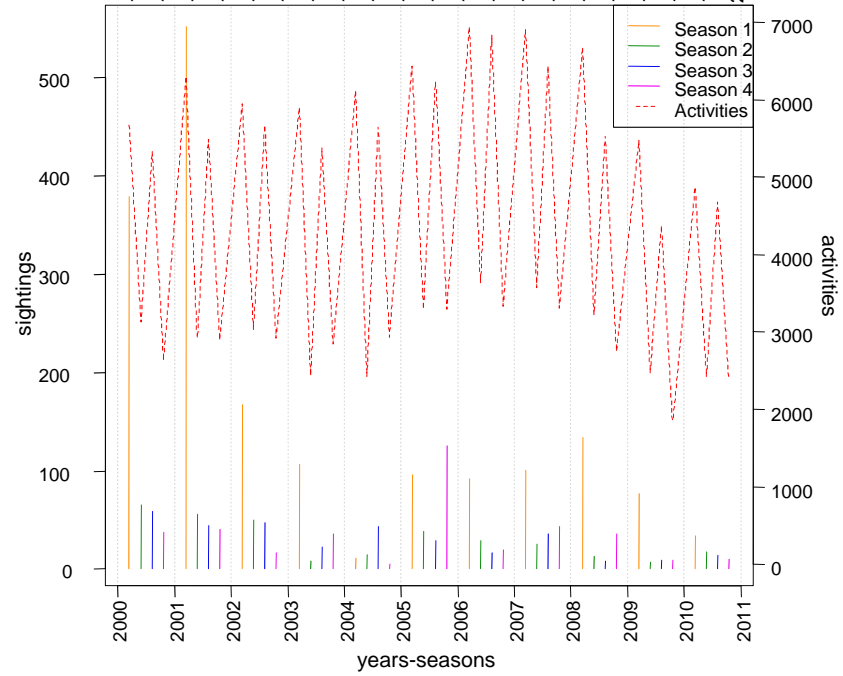

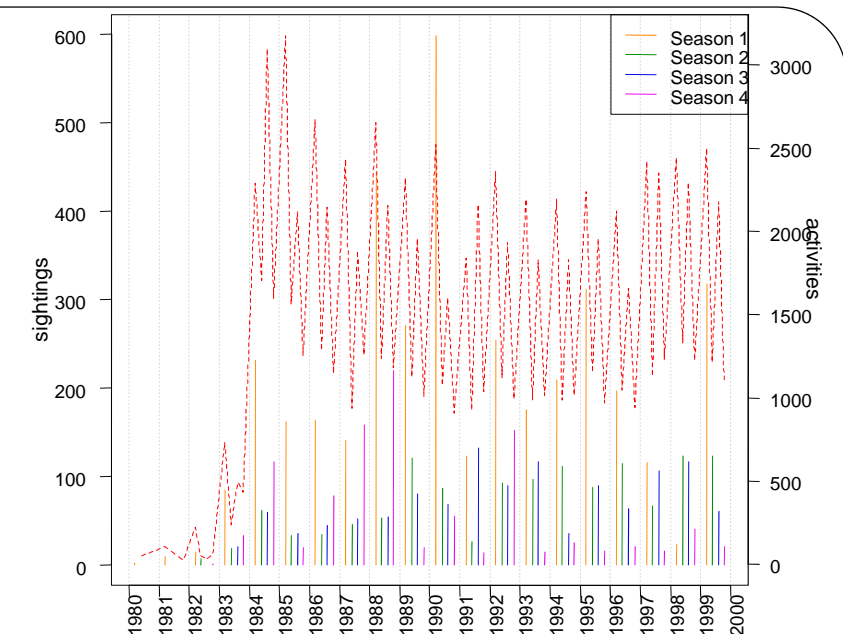

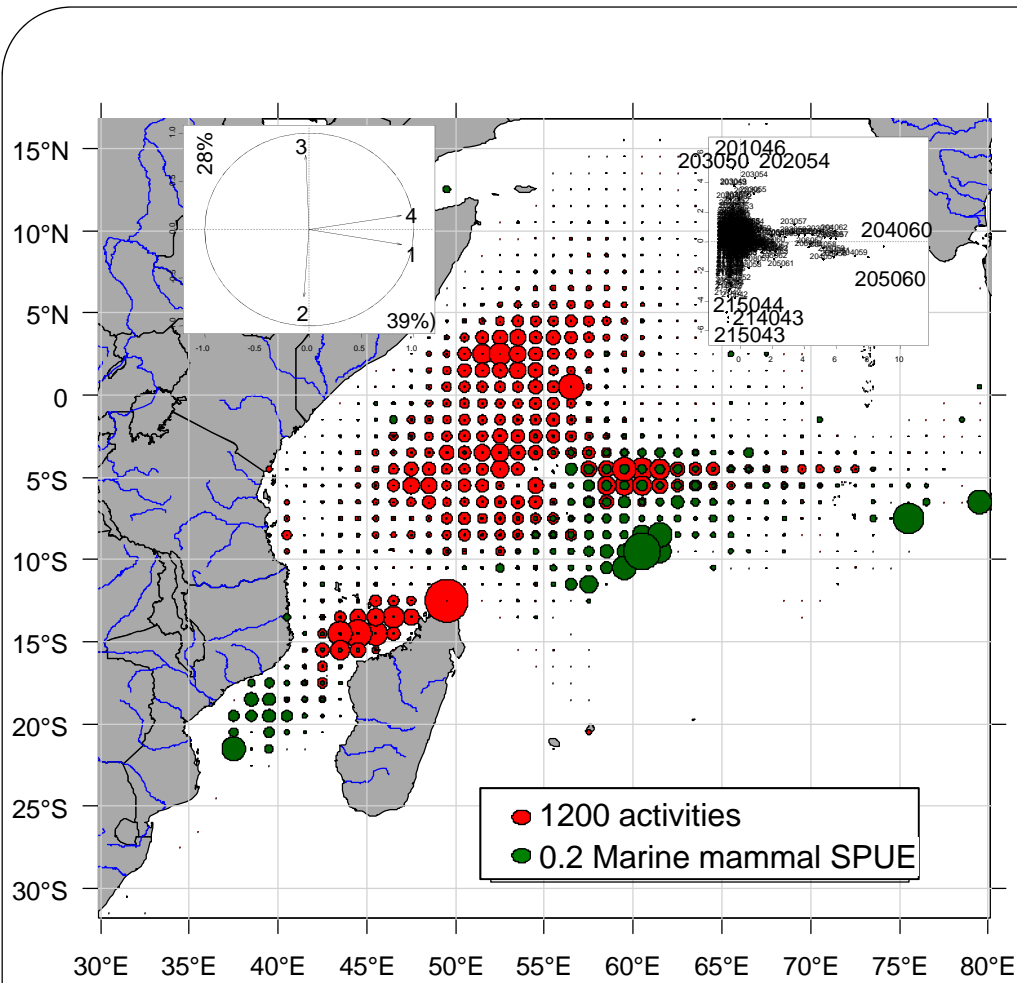

Catch= 0.9%

Survival= 98.5%

Marine mammal distribution and annual, seasonal variations of marine mammal sightings and activities

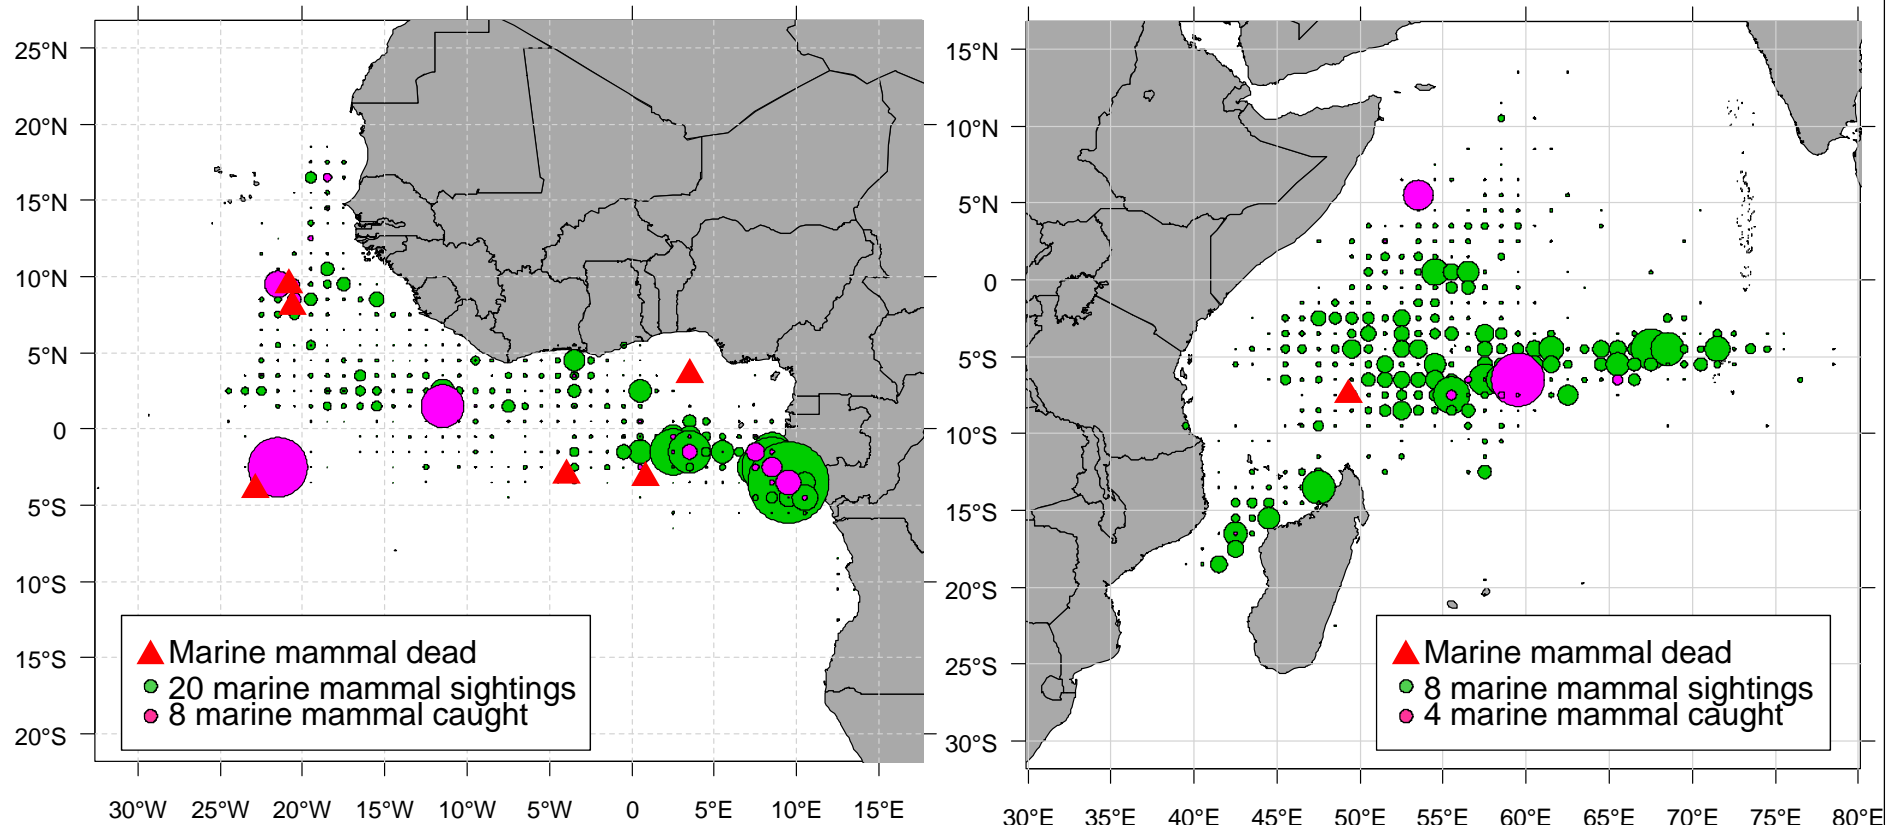

- Wider distribution in comparison to WHS
- Coastal zone of Gabon (WHA) from April to September

● Seychelles (MAM) and Mozambique Channel (WHA)

● Preponderance of December to March and April-May

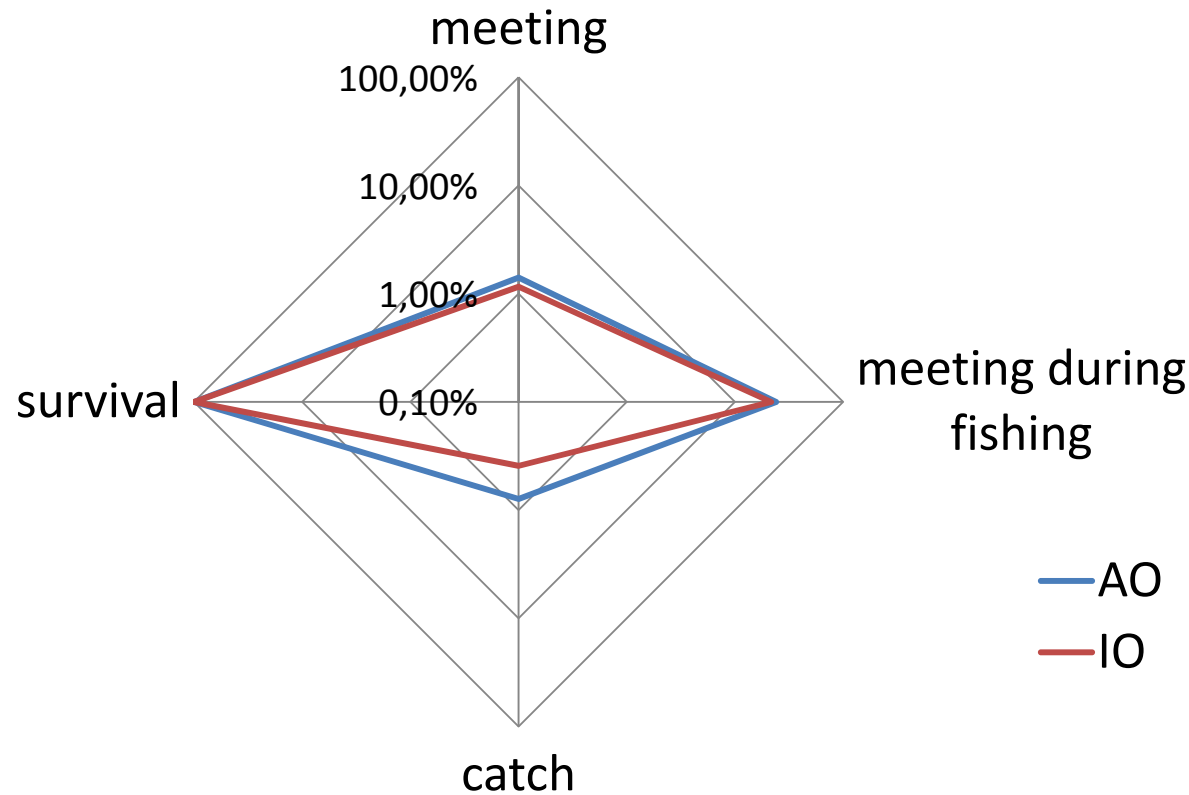

Distribution of observations, catches and mortality of marine mammals (Scientific observer data)

AO: Littoral zone of Gabon. 14 mortality cases on 193 (8 STW and 5 WHA)

IO: Mozambic Channel and near to the Seychelles. One mortality case on 41 (WHA).

Indices of interactions between PSF and MAM

Spider graph (logarithmic scale)

Meeting= 1.3%

Meeting during fishing= 23%

Catch= 0.6%

Survival= 99.7%

Discussion

- Environmental conditions that influence the distribution of co-occurrence of activities and observations (Sequeira et al., 2012; Saetre & Da Silva, 1984).

- Apparent low impact in the studied oceans (different from the Pacific, Hall, 1998)

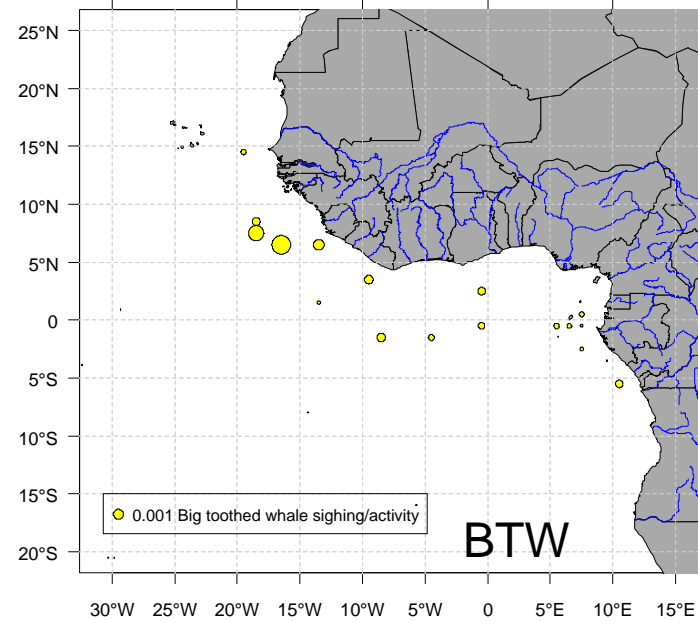

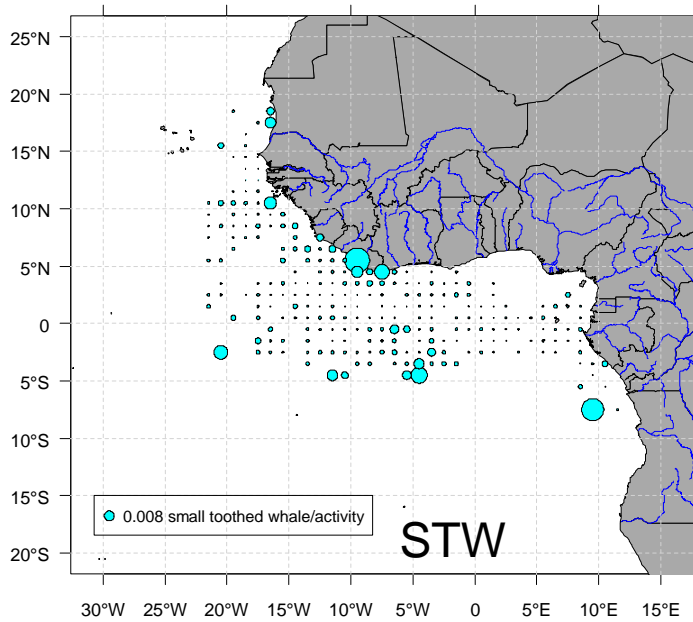

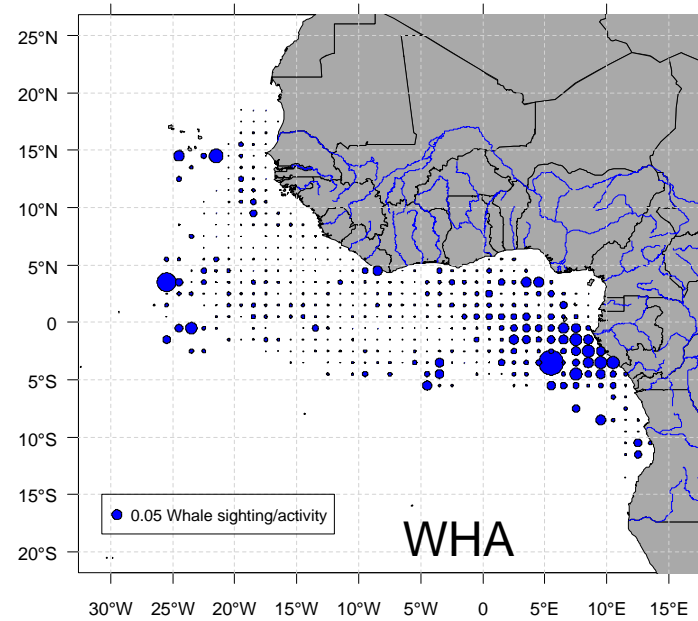

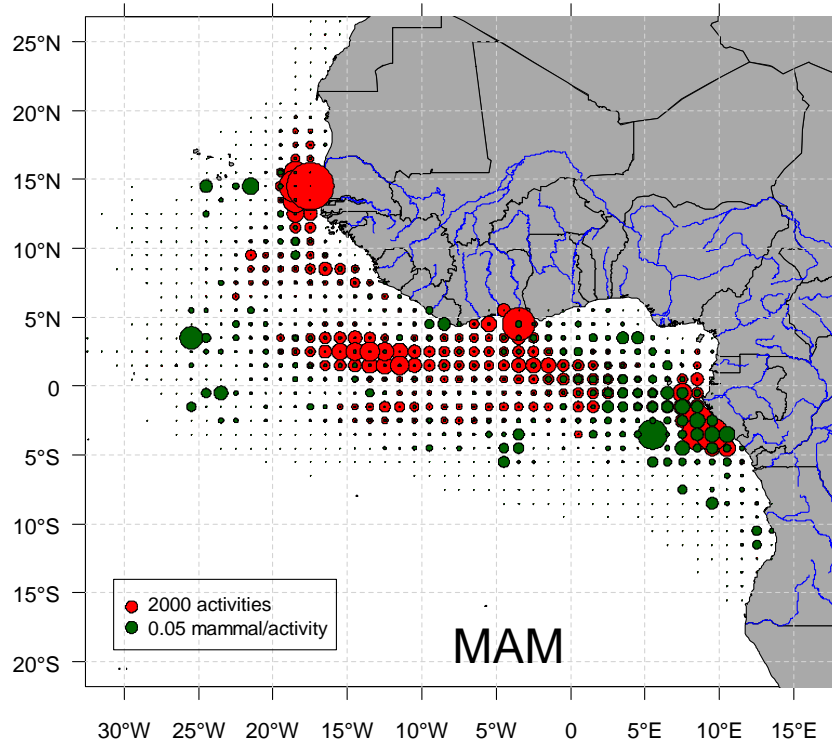

Conclusions and perspectives

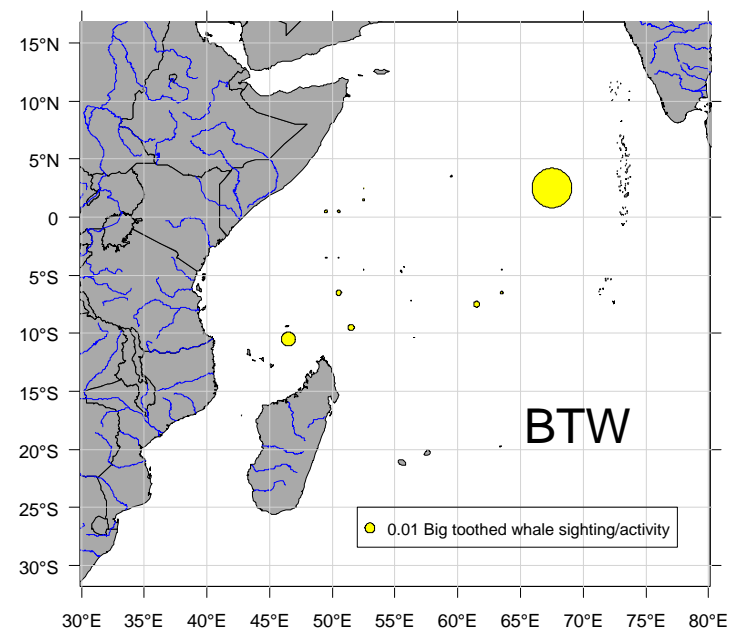

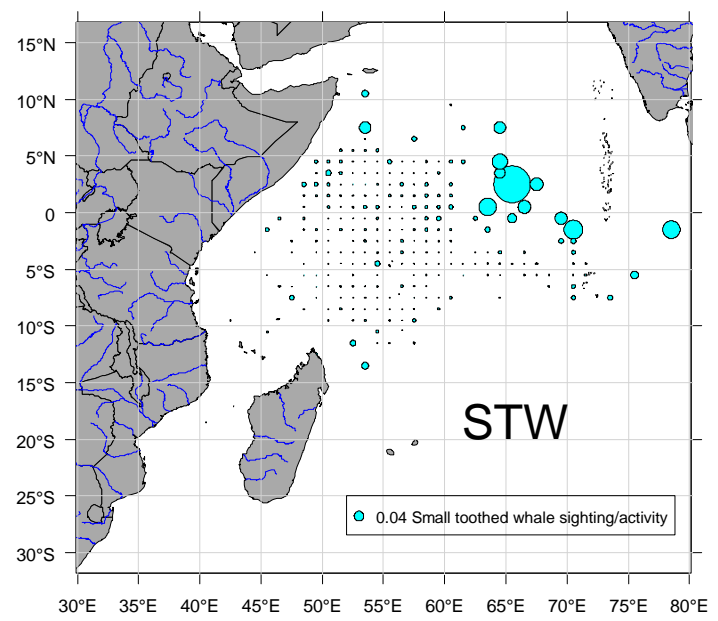

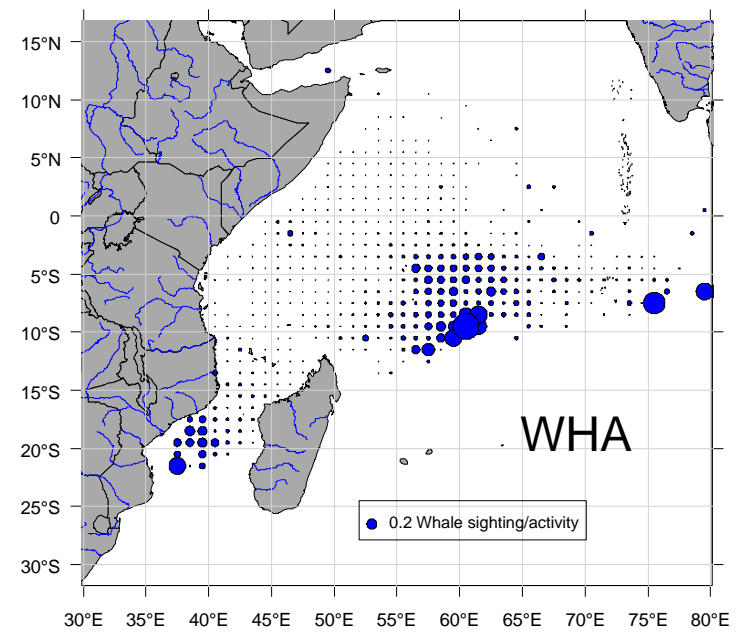

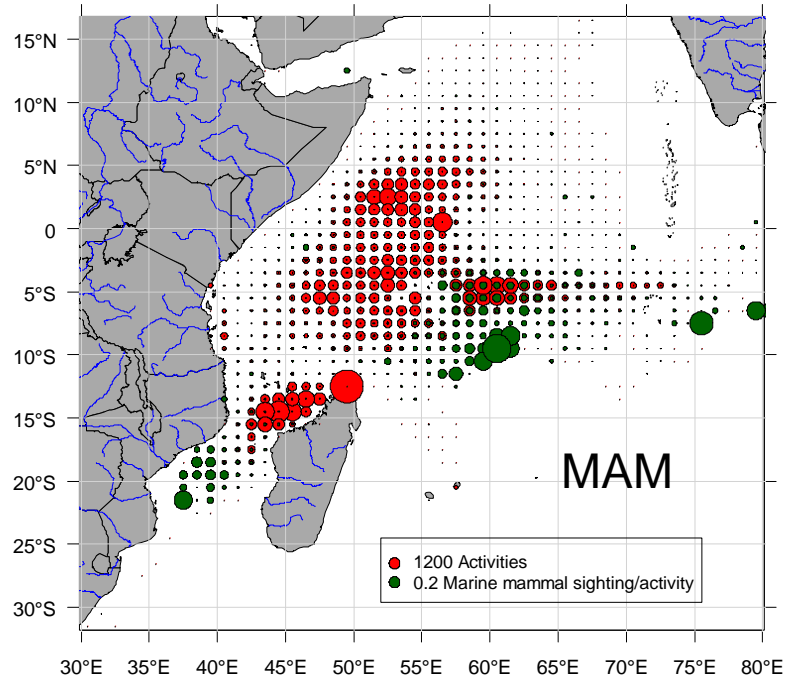

- Frequency distribution of co-occurrence of activities and observations influenced by seasons and years
- Hotspots of interactions: coastal zone of Gabon, Mozambique channel (WHS and MAM) and Seychelles (MAM)
- Form to the attention of shipmasters
- Need to increase the percentage of coverage of scientific observers
- Descriptive models for the study of environmental factors
- Tagging experiment (ISSF)
