

Residence times and vertical behaviour of tunas
around drifting fish aggregating devices (FADs)
in the Indian Ocean

Govinden Rodney, Forget Fabien, Filmalter John, Soria Marc, Dagorn Laurent

Introduction

- **Still do not understand why tuna associate with FADs**
- Understanding the associative behaviour of tunas
- How much time tuna spends around FADs
- Document the short excursions made by tunas
- Describe the vertical behaviour
- How does these behaviour differ between regions

Method

- Tagged tunas around DFADs during 4 research cruises in two regions
 - Mozambique Channel
 - Seychelles
- Surgically implanted coded V13P tags
- DFADs equipped with VR4s

Method

Study sites

Method

Tagging summary

| DFAD | Location | No. of SKJ-YFT-BET tagged | No. of SKJ-YFT-BET detected |
|------|--------------------|---------------------------|-----------------------------|
| 31 | Mozambique Channel | 6-6-2 | 5-5-0 |
| 34 | Mozambique Channel | 7-6-2 | 6-6-2 |
| 41 | Mayotte | 0-3-0 | 0-2-0 |
| 42 | Mayotte | 0-1-0 | 0-1-0 |
| 43 | Seychelles | 3-3-1 | 1-0-0 |
| 30 | Seychelles | 0-2-0 | VR4 did not work |
| 37 | Seychelles | 2-6-0 | 1-5-0 |
| 28 | Torre Guilia | 0-5-0 | 0-4-0 |
| 32 | Torre Guilia | 2-4-5 | 1-4-4 |

- Total number of fish detected (tagged): SKJ = **14 (20)**
YFT = **27 (36)**
BET = **6 (10)**

Data Analysis

How much time tuna spends around FAD

- Continuous residency times (CRT) 24hrs

Document the short excursions made by tunas

- Fine-scale continuous residency times (FCRT) 1hr
- Absence time (AT)

How does these behaviour differ between regions

- Survival curves
- Cox proportional hazards regression model (Wald statistics)

Data Analysis

Vertical distribution

- Grouped by 10 cm size classes
- Frequency of depth distributions during day and night

Comparisons

- Day and night distribution
- Between same species of different size classes at each region
- Between same species of the same size class by region
- Between different species of the same size at same regions
- Mann Whitney U test

Results

How much time does tunas spend around FADs
Mozambique Channel

Results

Seychelles

Results

Continuous residency times (CRT) (days)

| | | Mozambique channel | Seychelles |
|------------|---------|--------------------|------------|
| BET | Average | 5.2 | 8.8 |
| | SD | 1.9 | 8.9 |
| | Max. | 6.6 | 16.5 |
| | n | 2 | 4 |
| SKJ | Average | 5.2 | 0.2 |
| | SD | 4.8 | 0.1 |
| | Max. | 18.3 | 0.3 |
| | n | 15 | 3 |
| YFT | Average | 7.6 | 5.9 |
| | SD | 7.8 | 8.0 |
| | Max. | 26.7 | 23.7 |
| | n | 16 | 19 |

Results

CRT comparison between region

- Comparison only possible for YFT
- No significant difference (Wald test, $p=0.58$)

CRT comparison within region

- SKJ and YFT in Mozambique Channel
- No significant difference (Wald test, $p=0.181$)

Need to understand fine-scale movement of tunas

Results

Short-scale movements of tuna at FADs

Mozambique Channel

Results

Seychelles

Results

Fine-scale continuous residency times (FCRT)

| | | Mozambique channel | Seychelles |
|------------|---------|--------------------|------------|
| BET | Average | 0.4 | 0.7 |
| | SD | 0.4 | 1.1 |
| | Max. | 1.0 | 6.8 |
| | n | 18 | 39 |
| SKJ | Average | 0.3 | 0.1 |
| | SD | 0.3 | 0.1 |
| | Max. | 1.6 | 0.2 |
| | n | 185 | 6 |
| YFT | Average | 0.7 | 0.2 |
| | SD | 0.9 | 0.4 |
| | Max. | 6.7 | 3.7 |
| | n | 152 | 297 |

Results

FCRT comparisons between regions

| | | Mozambique channel | Seychelles |
|------------|---------|---------------------------|-------------------|
| BET | Average | 0.4 | 0.7 |
| | Median | 0.6 | 0.6 |
| | Max. | 1.0 | 6.8 |
| | n | 18 | 39 |

- No significant difference (Wald test, $p=0.149$)

Results

FCRT comparisons between regions

| | | Mozambique channel | Seychelles |
|------------|---------|---------------------------|-------------------|
| YFT | Average | 0.7 | 0.2 |
| | Median | 0.6 | 0.1 |
| | Max. | 6.7 | 3.7 |
| | n | 152 | 297 |

- Significant difference (Wald test, $p = <0.0001$)
- Comparison not possible for SKJ

Results

FCRT comparisons within regions

| | | BET | SKJ | YFT |
|-------------------------------|---------|------------|------------|------------|
| Mozambique channel | Average | 0.4 | 0.3 | 0.7 |
| | Median | 0.6 | 0.2 | 0.6 |
| | Max. | 1.0 | 1.6 | 6.7 |
| | n | 18 | 185 | 152 |

- BET vs SKJ = Significant difference (Wald test, $p=0.0209$)
- BET vs YFT = No significant difference (Wald test, $p=0.0681$)
- SKJ vs YFT = Significant difference (Wald test, $p<0.0001$)

Results

FCRT comparisons within regions

| | | BET | SKJ | YFT |
|-------------------|---------|------------|------------|------------|
| Seychelles | Average | 0.7 | 0.1 | 0.2 |
| | Median | 0.6 | 0.03 | 0.1 |
| | Max. | 6.8 | 0.2 | 3.7 |
| | n | 39 | 6 | 297 |

- BET vs YFT = Significant difference (Wald test, $p = <0.0001$)
- How does these compare to the amount of time spent away from the FAD

Results

How much time tuna spends away from FAD
Absence time (AT)

| | | Mozambique channel | Seychelles |
|------------|---------|---------------------------|-------------------|
| BET | Average | 0.13 | 0.16 |
| | SD | 0.06 | 0.20 |
| | Max. | 0.26 | 0.76 |
| | n | 16 | 35 |
| SKJ | Average | 0.20 | 0.05 |
| | SD | 0.26 | 0.01 |
| | Max. | 2.27 | 0.06 |
| | n | 174 | 3 |

Results

Vertical behaviour

Day and night comparisons

Seychelles

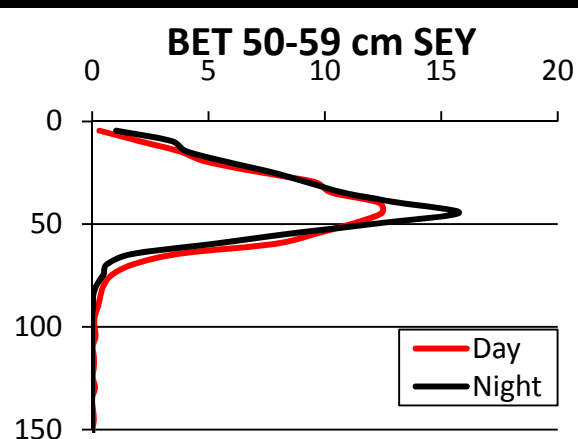

- Significant differences in day and night depth distributions
- Except BET 40-49 cm (Mann-Whitney U test, $p=0.502$)

Results

Vertical behaviour

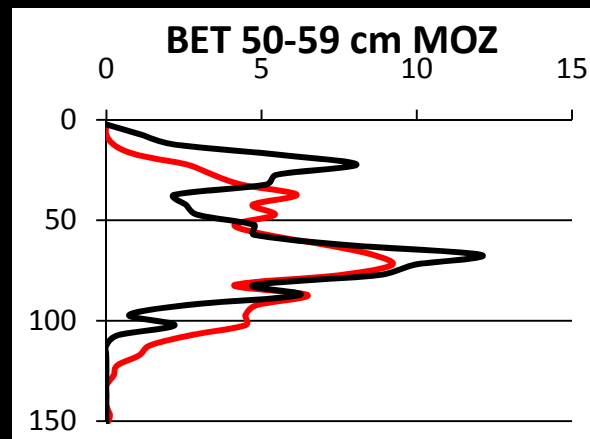

Comparison between same species of the same size class by region

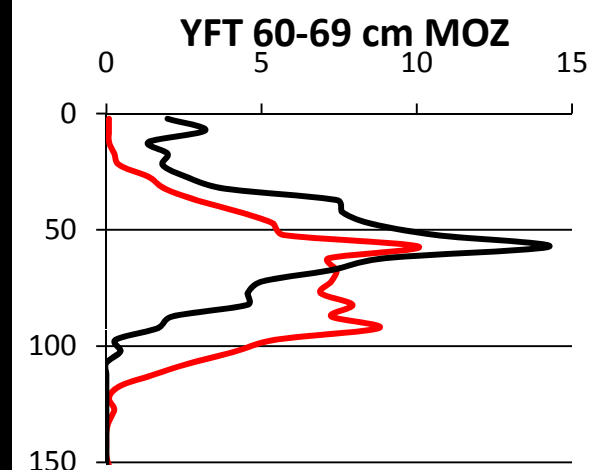

Average Depth
Day = **40m**
Night = **36m**

Average Depth
Day = **41m**
Night = **33m**

Average Depth
Day = **67m**
Night = **56m**

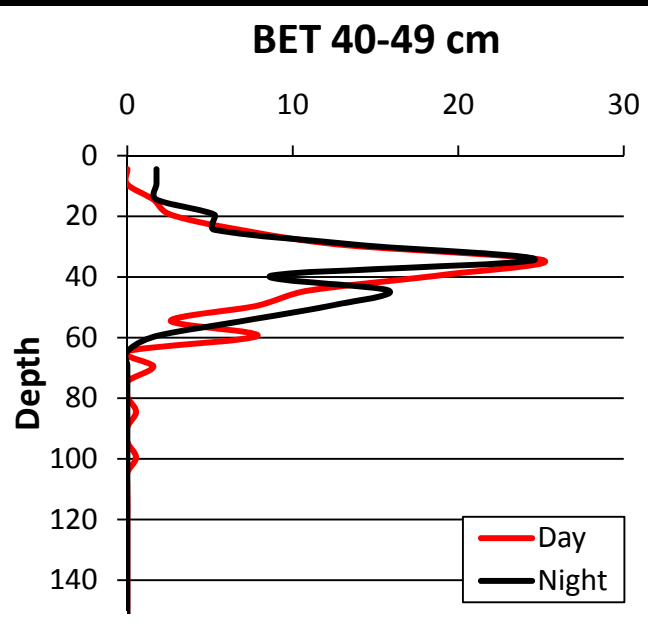

Average Depth
Day = **72m**
Night = **52m**

- Significant differences in day and night depth distributions
- BET and YFT deeper in Mozambique Channel

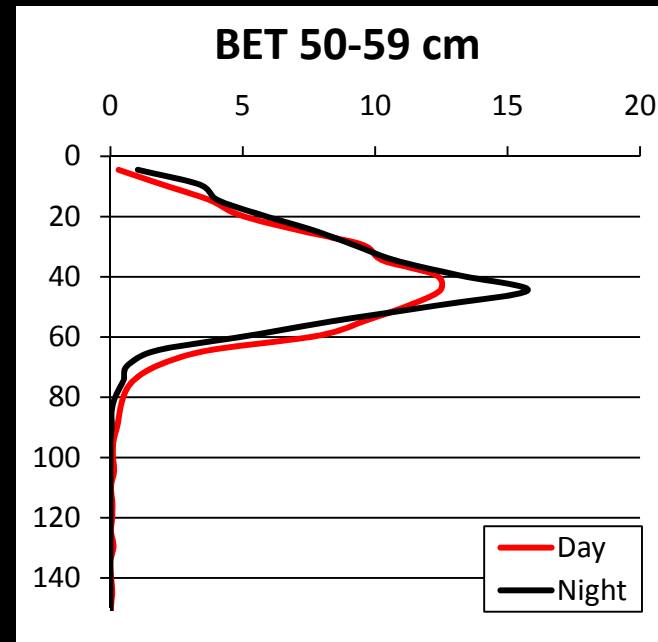

Results

Comparisons between same species of different size classes

Seychelles

Average Depth
Day = **36m**
Night = **34m**

Average
Depth
Day = **40m**
Night = **36m**

- Significant difference during day (Mann-Whitney U test, $p=0.003$)
- No difference during night (Mann-Whitney U test, $p=0.34$)

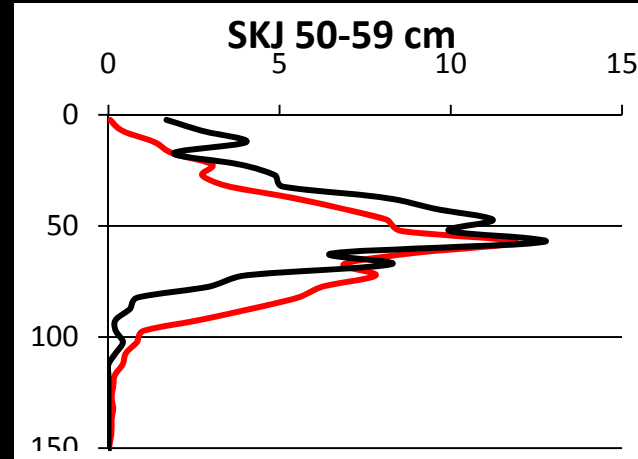

Results

Comparisons between same species of different size classes

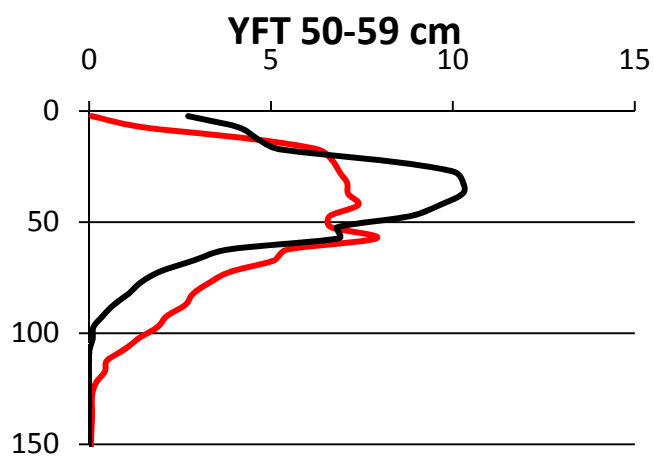

Mozambique

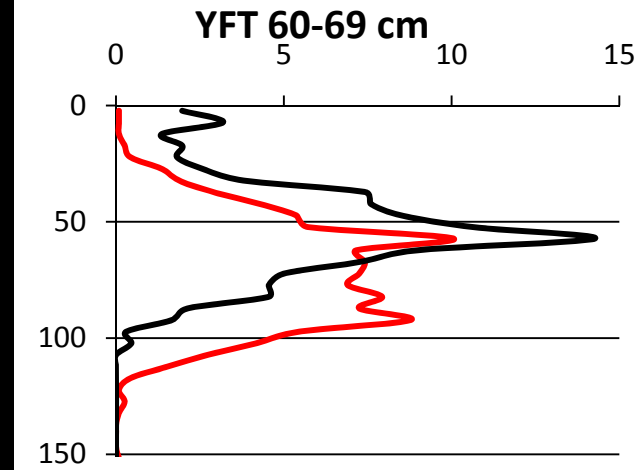

Average Depth
Day = **49m**
Night = **38m**

Average Depth
Day = **59m**
Night = **46m**

Average Depth
Day = **50m**
Night = **38m**

Average Depth
Day = **72m**
Night = **52m**

- Significant difference between day and night distributions
- Larger SKJ and YFT deeper in Mozambique Channel

Results

Comparisons between different species of the same size

Mozambique Channel

Average Depth

Day = **67m**

Night = **56m**

Average Depth

Day = **59m**

Night = **46m**

Average Depth

Day = **50m**

Night = **38m**

- Significant difference during day and night distributions (Mann-Whitney U test, $p < 0.0001$)
- Depth = BET > SKJ > YFT

Conclusion

- Variability in the associative behaviour between and among regions
- YFT in Mozambique Channel more associated to FADs
- Diel pattern in depth distributions
- Variations in the depth distribution between sites
- Size differences in depth distributions
- Larger size classes were deeper

THE END

Questions??
